

The schematic diagram illustrates the power supply section of the circuit. It begins with an AC input (L, N) connected through a fuse (F1) and a MOV (MOV1) to an AC/DC converter (AC/DC1). The output of the AC/DC converter is connected to a 5V regulator (LM1117MPX-3.3/NOPB) through a 0.1uF/50V capacitor (C2). The 5V regulator is connected to a 3V3 regulator (LM1117MPX-3.3/NOPB) through a 220uF/16V capacitor (C1). The 3V3 regulator is connected to the LED driver section through a 10uF/16V capacitor (C3). The LED driver section includes a 1k2-5% resistor (R1) and an LED (D1).
